

Grade 9 Transitional Mathematics

Course Code 3923

Course Credit 1.0

ENGLISH Program

Discipline Overview

The Kindergarten to Grade 12 mathematics curriculum in the English Program is designed to meet learners' interests, skills, and needs so they can realize that mathematics is a way of building their understanding of the world and that it is part of their everyday lives.

The learning outcomes of this program of study are divided into four areas:

- Number
- Patterns and relations
- Shape and space
- Statistics (starting in Grade 2) and probability (starting in Grade 5)

These areas reflect the nature of mathematics from Kindergarten to Grade 12.

The study of mathematics promotes the development of global competencies and supports learners' cultivation of enduring understandings. It also fosters the development of logical thinking, problem-solving, and data analysis skills.

Learning experiences and evaluation in the mathematics classroom are based on a problem-based learning approach that allows learners to make connections between their conceptual understanding and various mathematical processes. Integrating these processes into learning helps learners to understand the nature of mathematics, and to make sense of it so they can learn and use mathematics in and out of school throughout their lives.

Course Overview

Grade 9 Transitional Mathematics learners in the full course will demonstrate lifelong learning habits such as flexibility, awareness of thinking, and accuracy and precision when discussing and writing work, both independently and cooperatively. They will strengthen their understanding of concepts related to basic arithmetic, including mental math and estimation strategies, and percents and their relationship to decimals, fractions, and whole numbers. They will also

strengthen their skills related to operations on whole numbers, fractions, decimals, and integers, as well as those related to algebra (such as solving expressions and linear equations), to geometry and measurement (such as transformations, angles, perimeter, area of shapes, and volume of objects), and to statistics (such as the measure of central tendencies). They will develop and apply strategies, concepts, and skills to conduct and analyze investigations related to angles, Pythagoras's theorem, and patterns and relations. Learners will make informed decisions related to a purchase, to nutrition and fitness, to the operation of a team (such as the selection of a facility for practices and expenses) and to a room renovation (considering the measurement of perimeter and area, and the use of percent, ratio, and scale), and they will justify their decisions.

Global Competencies in Mathematics

Critical Thinking

Critical thinking in mathematics involves the ability to compare, evaluate, critique, justify, test, and validate ideas, representations, plans, or solutions using logical arguments, criteria, and evidence. It requires metacognition in learners, enabling them to solve mathematical problems and situations, communicate their reasoning effectively, and make ethical decisions.

- Learners research, use, and think about a variety of ideas and information strategically, efficiently, and effectively to make decisions and choices.
- Learners evaluate their own and others' ideas, as well as possible solutions, by considering different perspectives, biases, and the validity and relevance of supporting sources.
- Learners use inductive reasoning to explore and record results; to analyze mathematical ideas, problems, and situations; to make observations and generalizations from patterns; and to test these generalizations based on criteria and evidence.
- Learners recognize that certain math beliefs influence how they perceive themselves as math learners.
- Learners demonstrate a willingness to reconsider their own thinking and to consider others' thinking about mathematical ideas, problems, or situations.
- Learners ask relevant and clarifying questions to further learning and enhance comprehension of mathematical ideas, concepts, problems, and situations.
- Learners make judgments based on thoughtful criteria to then make decisions and solve mathematical problems and situations, enabling them to take action in an informed manner.
- Learners use deductive reasoning to solve mathematical problems and situations, reach new conclusions based on what is already known or assumed to be true, and make ethical decisions.

Creativity

Creativity in mathematics involves flexible thinking, curiosity, and risk taking, as well as making connections to prior knowledge among learners; this allows learners to come up with innovative solutions to a variety of mathematical problems and situations by considering them from a new angle or by formulating new hypotheses.

- Learners embrace a learning environment of trust and respect that encourages them to make choices, take risks, and think flexibly—allowing them to make decisions and take action.
- Learners wonder, ask questions, and contemplate different mathematical ideas and concepts.
- Learners solve mathematical problems and situations using different ways to arrive at innovative solutions.
- Learners enrich and refine their reasoning by considering others' ideas.
- Learners formulate, adjust, and refine their plans for solving mathematical problems and situations by looking at them from a new angle.
- Learners validate and adapt plans, ideas, strategies, or solutions, while persevering through obstacles, so they can improve at solving mathematical problems and situations.
- Learners seek and use feedback from others to develop and consolidate their conceptual understanding, deepen their reasoning, and reflect on their processes for solving mathematical problems and situations.

Citizenship

Citizenship in mathematics involves the development of mathematical literacy that enables the application of mathematical ideas and concepts in a variety of everyday contexts, awakening learners' curiosity about their role as citizens who can actively contribute to society, think critically about the world, make informed decisions, and generate solutions to an issue from a variety of perspectives.

- Learners use mathematics as a means of developing their understanding of a range of complex social, cultural, economic, and political issues, and to help them reflect on them.
- Learners mobilize their mathematical knowledge and skills to analyze and understand issues related to discrimination, equity, and human rights by investigating or proposing solutions to a variety of mathematical problems or situations related to these issues.
- Learners mobilize their mathematical knowledge and skills to explore, analyze, and understand the impact of the interconnectedness of self, others, and the natural world by investigating or proposing solutions to a variety of mathematical problems and situations related to this issue.

- Learners show interest in others' approaches to mathematics and to different points of view, experiences, and worldviews, allowing them to better understand and solve mathematical problems and situations.
- Learners empathize with others whose ideas are different from their own and appreciate solutions to mathematical problems or situations proposed by others.
- Learners interact and learn with others in person or online in a responsible, respectful, and inclusive manner by welcoming and valuing diverse viewpoints, and by considering a range of ideas and perspectives when contributing to mathematical exchanges.
- Learners realize that their mathematical knowledge and skills will serve not only to improve their own quality of life but also that of others.
- Learners engage in meaningful mathematical inquiries, individually and in collaboration, in which they ask themselves and others questions so they can find equitable solutions and make ethical decisions.
- Learners appreciate how mathematics can be used to make and justify ethical decisions that lead to responsible and sustainable actions that affect themselves, their community, and the world.

Connection to Self

Connection to self in mathematics involves the learner's belief in their ability to approach and complete tasks, solve mathematical problems and situations, and persevere in the face of mathematical challenges. It also involves the learner's ability to engage positively in reflective practices about their learning in order to set goals for self-improvement.

- Learners believe in their ability to learn and understand the world of mathematics and its impact on their daily lives.
- Learners recognize the elements that shape their identity as math learners, and they see themselves as mathematicians.
- Learners allow themselves the time they need, and they implement strategies that foster a growth mindset to develop a positive relationship with mathematics.
- Learners consider reflecting on their own decisions, the efforts they deploy, the experiences they have, and feedback from others as learning opportunities to improve their knowledge and skills in mathematics.
- Learners reflect on their mathematical learning to set goals and make informed decisions that affect their well-being.

- Learners believe that their ability to learn, their talents, and their skills in mathematics will continue to improve throughout their lives through their hard work, perseverance, and effort.
- Learners are willing to take risks, ask for help, and persevere, despite obstacles.
- Learners demonstrate the ability to make changes and adapt to new mathematical contexts, knowing that they will learn from their mistakes and build on their personal strengths.
- Learners develop their autonomy, value their voice, and commit to their role in becoming lifelong mathematics learners.

Collaboration

Collaboration in mathematics involves adhering to a culture of exchanging ideas and viewpoints in order to improve, both collectively and individually, and to learn from and with others to develop and apply new ideas in mathematics.

- Learners collaborate with others, value diverse points of view, and consider a range of ideas and perspectives when contributing to mathematical exchanges.
- Learners participate actively and fully in learning experiences by sharing thinking and learning strategies with others to confirm or extend understandings of mathematical ideas; they respectfully voice their opinions, ideas, and conjectures.
- Learners value the contributions of others, making room for different points of view that will foster mathematical exchanges.
- Learners practise active listening, question their own and others' mathematical ways of thinking, and ask questions of others to deepen their understanding of mathematical concepts and ideas.
- Learners show a willingness to compromise and change their opinions when presented with convincing arguments during mathematical exchanges.
- Learners make sense of mathematical concepts and ideas by co-constructing their understanding with others.
- Learners support others and take responsibility for their roles throughout the learning process and in the execution of mathematical tasks.

Communication

Communication in mathematics involves the learners' ability to share their mathematical ideas, reasoning, and solutions in a variety of ways, including orally, in writing, concretely, graphically, and symbolically, and in various contexts. It enables learners to clarify and validate their ideas and reasoning, and to challenge their attitudes and beliefs about mathematics.

- Learners express their mathematical ideas and emotions about mathematics, taking into account non-verbal cues and adjusting what they say according to the context.
- Learners present their mathematical ideas visually, orally, in writing, graphically, or symbolically, taking into account the conventions related to the mode of communication used, their audience, and the types of communication contexts, while using clear, precise mathematical language.
- Learners understand how their words and actions shape their identity as mathematical learners and shape their relationships with others.
- Learners look for oral, non-verbal, or visual cues during exchanges to improve their understanding of terminology, what others are saying, ideas presented, and various solutions to mathematical problems and situations.
- Learners seek to understand different points of view and different solutions to a mathematical problem or situation by observing, practising active listening, and asking clarifying questions, thereby creating a culture of mutual communication.
- Learners recognize and accept that the ways they learn and represent their understanding may be different from those of others.
- Learners make sense of mathematical ideas, problems, and situations, and deepen their understanding, by making connections among their own language, mathematical terminology, and mathematical conventions.
- Learners contribute to mathematical exchanges and express their thoughts and emotions about mathematical ideas in a positive and respectful way, whether in person or online.
- Learners defend their points of view and their mathematical reasoning while accepting the points of view and reasoning of others in a constructive and responsible way; they understand how these exchanges benefit themselves as much as they do other members of their learning community.

Enduring Understandings

Mathematics, a tool for growth

Developing knowledge and skills in mathematics allows for the understanding of processes, theorems, concepts, situations, and their applications. Building mathematical knowledge allows learners to identify as citizens who believe in their ability to complete a task, a lesson, or a challenge successfully—motivating them to take action and persevere throughout their lifetime to achieve their goals.

Mathematics, a tool for seeing things differently

Mathematics is a part of the living world. It develops one's capacity to think fluidly and creatively, and to understand, interpret, and logically represent various phenomena that can be imperceptible or abstract, to put these phenomena in perspective regarding one another, and to analyze them from a different point of view.

Mathematics, a vital tool for understanding the world

Mathematics contributes to the analysis, the comprehension, the interpretation, and the description of the world in which we live. It allows one to study quantities, orders, spaces, numbers, and figures, and the links that exist among them.

Mathematics, an essential interdisciplinary tool for advancing society

Mathematics plays an important role in people's quest for innovation and solutions for the various problems encountered in advancing society. It is used in other disciplines to understand, describe, and interpret the phenomena that surround us, and it allows researchers to improve quality of life through innovation and the development of new technology.

Mathematics, an essential tool for all aspects of daily life

Mathematics is everywhere in society. Mathematical knowledge and skills are necessary for critically analyzing information in diverse social, personal, economic, political, cultural, and environmental contexts in order to make informed, ethical, and sustainable decisions in all aspects of daily life.

Learning Outcomes

Transitional Math – Full Course

I		II	
ALL of the following 4 units:		ALL of the following 4 units:	
A: Learning to Learn	9 hours	A: Learning to Learn	6 hours
B: Smart Mathematics	12 hours (15 min/day)	B: Smart Mathematics	12 hours (15 min/day)
C: Investigations	7 hours	C: Investigations	10 hours
D: Activities for Skill Development	15 hours	D: Activities for Skill Development	15 hours
Plus		Plus	
ONE of the following units:	1 unit @ 12 hours	ONE of the following units:	1 unit @ 12 hours
E: Money Management		E: Nutrition & Fitness	
F: Scheme-a-Team		F: Create Your Space	

Unit A: Learning to Learn

General Learning Outcome: Demonstrate, through discussion and written work, the following behaviours:

- persistence
- managing impulsivity
- listening with empathy and understanding
- flexibility in thinking
- thinking about thinking (metacognition)

I-A-1. Use specific strategies in different problem-solving situations.

I-A-2. Demonstrate a willingness to work independently as well as to work interdependently as a team member.

I-A-3. Use questioning/clarifying to improve creative thinking.

Half Course I Learning Outcomes:

Unit B: Smart Math

General Learning Outcome: Develop number sense by explaining mental strategies for calculating and estimating solutions to problems.

- I-B-1.** Use a visual model to make reasonable estimates of percent and corresponding number values.
- I-B-2.** Use reasoning to mentally calculate 50% of a variety of numbers, and explain the method.
- I-B-3.** Use $\frac{1}{2}$ and 0.50 along with 50% to perform mental calculations.
- I-B-4.** Use reasoning to mentally calculate 100% when 50% is known, and explain the strategies for calculation.
- I-B-5.** Use reasoning to mentally calculate 25% (including $\frac{1}{4}$ and 0.25) of a variety of numbers, and explain the strategies for the calculations.
- I-B-6.** Use reasoning to mentally calculate 12½% (including $\frac{1}{8}$ and 0.125) of a variety of numbers, and explain the method(s) used to solve the problems.

General Learning Outcome: Use a concrete model to build and develop an understanding of addition and subtraction of integers.

- I-B-7.** Use a “charges model” to represent operations involving signed numbers.
- I-B-8.** Model and explain addition involving integers, and understand the need for the “zero principle” to model some situations.
- I-B-9.** Model and explain subtraction involving integers, and understand the need to apply the “zero principle” to model some situations.

General Learning Outcome: Use concrete, pictorial, and symbolic representations of algebraic expressions.

- I-B-10.** Recognize patterns and use them to develop oral expressions.
- I-B-11.** Model, sketch, and represent symbolically an algebraic expression.

Unit C: Investigations

General Learning Outcome: Develop and use mathematical strategies, concepts, and skills in the context of mathematical investigations.

- I-C-1.** Conduct and analyze mathematical investigations.
- I-C-2.** Use forms to outline procedures used, difficulties encountered, and patterns discovered.

Unit D: Activities for Skill Development

General Learning Outcome: Compete activities intended to motivate and remediate concepts and skills in arithmetic and geometry.

- I-D-1.** Visualize, compare, and explain fractions.
- I-D-2.** Round and estimate whole numbers and decimals.
- I-D-3.** Apply arithmetic operations on fractions.
- I-D-4.** Identify the operation(s) needed in problem solving.
- I-D-5.** Understand and apply concepts and vocabulary related to triangles.
- I-D-6.** Read and interpret various line graphs.

Plus ONE of the following units:

Unit E: Money Management

General Learning Outcome: Develop and use mathematical strategies, concepts, and/or skills to solve problems in real-life contexts.

- I-E-1.** Make decisions concerning purchasing, and justify those decisions using a five-step purchase process.
- I-E-2.** Prepare a written report outlining an item to be purchased, researching the best buy, investigating options, and summarizing the final decisions.

Unit F: Scheme-a-Team

General Learning Outcome: Develop and use mathematical strategies, concepts, and/or skills to solve problems in real-life contexts.

- I-F-1.** Make decisions concerning the operation of a team, and justify those decisions both practically and mathematically.
- I-F-2.** Prepare and present a written report outlining and justifying facility selection, league expenses, tournament expenses, and total expenses for a team project.

Half Course II Learning Outcomes:

Unit A: Learning to Learn

General Learning Outcome: Demonstrate, through discussion and written work, the following behaviours:

- persistence
- managing impulsivity
- listening with empathy and understanding
- flexibility in thinking
- thinking about thinking (metacognition)
- checking for accuracy and precision
- drawing on past knowledge
- questioning and problem posing
- precision of language and thought

II-A-1. Use specific strategies in different problem-solving situations.

II-A-2. Demonstrate a willingness to work independently as well as to work interdependently as a team member.

II-A-3. Use questioning/clarifying to improve creative thinking.

II-A-4. Recognize a preference for learning through the theory of multiple intelligences.

General Learning Outcome: Use a variety of methods including concrete models, to develop an understanding of variables, expressions, and equations.

II-B-1. Use a concrete model to demonstrate the concept of balance in algebra.

II-B-2. Substitute and determine the values for first-degree algebraic expressions and equations given the value for the variable.

II-B-3. Simplify algebraic expressions through the collection of like terms.

II-B-4. Solve one- and two-step first-degree linear equations containing one variable.

II-B-5. Model and solve one- and two-step first-degree linear equations using algebra tiles.

General Learning Outcome: Use a concrete model to build and develop an understanding of multiplication and division of integers.

II-B-6. Model and explain multiplication involving integers.

II-B-7. Use inverse operations to explain division of integers.

General Learning Outcome: Develop number sense by explaining mental strategies for calculating and estimating solutions to problems.

- II-B-8.** Review benchmarks (100%, 50%, 25%, 12½%).
- II-B-9.** Use reasoning to mentally calculate 10% of a variety of numbers, and explain the method(s) used to solve the problems.
- II-B-10.** Use reasoning to mentally calculate 5% of a variety of numbers, and explain the strategies for the calculations.
- II-B-11.** Use established percent benchmarks and reasoning to mentally calculate answers to number problems, and explain the methods used.

General Learning Outcome: Develop and use mathematical strategies, concepts, and skills in the context of mathematical investigations in algebra.

- II-C-1.** Conduct and analyze mathematical investigations to determine the pattern and express the relationship algebraically.
- II-C-2.** Write a formal report about an investigation.

General Learning Outcome: Complete activities that are intended to motivate as well as remediate introductory algebra.

- II-D-1.** Translate between written and algebraic expressions or between algebraic and written expressions.
- II-D-2.** Substitute and determine the values for first-degree algebraic expressions, given the value of one or more variables.
- II-D-3.** Simplify algebraic expressions through the collection of like terms.
- II-D-4.** Multiply monomials by monomials.
- II-D-5.** Multiply polynomials by a constant using the distributive property.
- II-D-6.** Solve and verify solutions to one- and two-step linear equations containing one variable.
- II-D-7.** Identify the number of different terms in any given polynomial.

Plus ONE of the following units:

Unit E: Nutrition and Fitness

General Learning Outcome: Develop and use mathematical strategies, concepts, and/or skills to solve problems in real-life contexts.

- II-E-1.** Make decisions concerning nutrition and activity, and justify those decisions both practically and mathematically.
- II-E-2.** Prepare a written report outlining and justifying a fitness program, including nutrition, realistic activity, or exercise, and whether a person would gain or lose weight using this fitness program.

Unit F: Create Your Space

General Learning Outcome: Develop and use mathematical strategies, concepts, and/or skills to solve problems concerning the measurement of perimeter and area, and the use of percent, ratio, scale, and proportions in real-life contexts.

- II-F-1.** Make decisions concerning room renovations, and justify those decisions both practically and mathematically.
- II-F-2.** Prepare and present a written report outlining and justifying design considerations including measurements, scale drawings, and the cost of materials for a room renovation project.

Curriculum Implementation Resources

Curriculum implementation resources are frequently added. Please refer to https://www.edu.gov.mb.ca/k12/framework/english/math/resources/grade_9.html.
